CUSTOM BLACK TUXEDO — DRAFTING & TAILORING SHEET

Slimming silhouette • Slightly oversized ease • 4.5" full satin-faced peak lapel

1. DESIGN BRIEF

Item	Specification
Jacket	Single-breasted, one-button, slightly oversized but clean and slimming
Lapels	4.5 in / 11.4 cm peak lapel; entire lapel faced in black satin/grosgrain
Shoulders	Structured and slightly extended; avoid excessive padding
Torso	Relaxed chest; moderate waist suppression; no tight waist cinching
Length	Longer modern tuxedo proportion; target finished length about 78–80 cm
Trousers	High rise, fuller thigh, controlled taper, slight break
Finish	Black-on-black wool body with black satin lapel and trouser stripe
Boutonniere	Single deep burgundy/red rose at left lapel buttonhole; minimal/no greenery

2. BODY MEASUREMENTS — SUPPLIED

Measurement	cm	Measurement	cm
Height	180	Weight	91 kg
Chest	105	Waist	101
Seat / hips	112	Shoulder width	46
Neck	45	Bicep	35
Thigh	60	Inseam	70
Across chest	49	Across back	54
Shoulder → neck	18	Armhole circumference	56
Waist → floor	105	Jacket length supplied	73
Rise	35	Knee	47
Shoulder → wrist	70		

Measurement note: the supplied 73 cm jacket length should be treated as the original body/measurement reference. The proposed finished jacket length below is longer and should be confirmed on the toile.

3. FINISHED JACKET TARGETS

Pattern / garment point	Target	Drafting intent
Finished chest	112–114 cm	≈ 7–9 cm ease over 105 cm body chest
Finished waist	106–108 cm	≈ 5–7 cm ease; deliberately not cinched
Finished seat / hem	116–118 cm	Allow seat ease and clean drape
Finished shoulder	47–48 cm	Slight extension from 46 cm body shoulder
Jacket length	78–80 cm	Longer line for slimming effect; fit to body/toile
Front balance	To be balanced in toile	Keep front hem level; account for posture
Button	1 button	Low/moderate stance; final position by toile
Vent	Double, 26–28 cm	Preferred for relaxed modern silhouette

Front pockets	Jetted or restrained flap	Keep visually clean and low-profile
Breast pocket	Straight/slightly angled welt	Minimal projection

4. LAPEL GEOMETRY — CRITICAL FEATURE

Feature	Specification
Width	4.5 in / 11.4 cm measured at the widest lapel point
Type	Peak lapel
Facing	Full satin or grosgrain facing across the entire lapel; no narrow edge piping
Peak	Sharp and elongated; point travels upward toward the shoulder
Gorge	Moderately low/elongated to create a longer vertical line
Roll	Soft controlled roll into the peak; avoid a stiff costume-like break
Collar	Black satin/grosgrain collar; clean transition into lapel
Buttonhole	Functional left lapel buttonhole sized for a single rose stem
Rose	Deep burgundy/red single rose, small-to-medium bloom, minimal greenery

5. JACKET CONSTRUCTION

Area	Construction direction
Front	Two-piece/side-body construction preferred; use vertical seams to control shape without tight waist suppression.
Chest	Maintain a clean, relatively flat chest with enough ease for sitting and arm movement.
Shoulder	Moderate canvas/padding; extend slightly beyond 46 cm body shoulder, but keep natural rather than exaggerated.
Armhole	Medium-high armhole with adequate circumference/ease; do not make it oversized and low.
Waist	Shape through side body and front dart/side seam rather than pulling the center front tight.
Lining	Full lining; Bemberg/viscose-type breathable lining preferred.
Canvas	Half canvas or full canvas recommended for a bespoke garment.
Sleeve	Two-piece sleeve, natural pitch, functional surgeon cuffs optional.
Hem	Clean, lightly rounded front edge; maintain enough coverage over seat.

6. SLEEVE SPECIFICATION

Point	Target / instruction
Body reference	Shoulder → wrist = 70 cm supplied
Finished sleeve length	Draft initially around 64–65 cm from shoulder point to cuff; verify with shirt cuff and toile.
Bicep	≈ 39–40 cm finished circumference
Elbow	Comfortable movement; avoid a narrow fashion sleeve
Cuff	Functional 4-button or 3-button surgeon cuff; show about 1–1.5 cm shirt cuff
Pitch	Set sleeve pitch to the wearer's natural arm position during fitting

7. TROUSER SPECIFICATION

Point	Target finished measurement / instruction
Waist	103–105 cm finished; high rise and comfortable waistband

Seat	116–119 cm finished
Thigh	64–66 cm finished circumference
Knee	45–46 cm finished circumference
Leg opening	40–42 cm finished circumference
Rise	35 cm body reference; draft high rise and confirm on toile
Inseam	70 cm supplied; do not lock final length until fitted with tuxedo shoes
Break	Slight break; avoid pooling fabric
Side stripe	Black satin/grosgrain, clean and narrow; align with trouser crease
Pleats	Flat front recommended; optional single forward pleat if extra thigh comfort is needed
Waistband	Clean extended waistband with hook/closure; no visible belt loops for classic tuxedo

8. FITTING / TOILE CHECKLIST

- Make a half-canvas or inexpensive toile before cutting the final tuxedo cloth.
- Confirm jacket length on the wearer while standing naturally and while seated.
- Confirm the 4.5 in lapel remains balanced with the shoulder width; keep the peak long rather than widening it further.
- Check collar gap, lapel roll, front balance and button position from front and side.
- Check that the jacket skims the stomach rather than gripping it; remove excess fabric only after posture and balance are corrected.
- Set sleeve pitch and final sleeve length with the actual dress shirt.
- Fit trousers with the intended tuxedo shoes; set final inseam and break only then.
- Check that the trouser crease falls cleanly from the center of the thigh/knee to the shoe.

IMPORTANT: Target finished measurements are starting specifications, not guaranteed final pattern dimensions. A professional tailor should draft using their own block/drafting system and correct the toile for posture, shoulder slope, arm pitch, balance and fabric behavior.

CLIENT DESIGN: Black one-button tuxedo • 4.5" full satin peak lapel • slimming relaxed fit • burgundy rose
